

Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

1. (Currently Amended) A product maintenance method for processing maintenance of a product, comprising:

receiving information regarding a repair request for a product from a terminal of a user who uses the product via the Internet;

transmitting screen information ~~with regard to~~ regarding repair conditions set for repairing the product to the terminal of the user via the Internet; and

receiving information regarding an agreement ~~to the~~ of the repair conditions and a repair request for the product from the terminal of the user via the Internet.

2. (Currently Amended) ~~A~~ The product maintenance method according to claim 1, further comprising:

transmitting information for displaying an input screen ~~to enable~~ that enables entry of user information including information with regard to a product to be repaired to the terminal of the user via the Internet;

receiving the user information from the terminal of the user via the Internet;

assigning a repair order ID ~~corresponding~~ that corresponds to the repair request;

storing the user information in a storage device together with the repair order ID; and

transmitting information ~~indicating~~ that includes the repair order ID to the terminal of the user via the Internet.

3. (Currently Amended) A product maintenance method for processing a maintenance of a product, comprising:

storing data regarding various types of packing boxes that are suitable for different products in a database;

receiving information regarding a repair request for a product from a terminal of a user who uses the product via the Internet;

selecting a type of packing box ~~corresponding~~ that corresponds to the product, ~~for which~~ the repair request ~~for which~~ has been received, based upon product information and the data stored in the database; and

transmitting information that instructs ~~instructing~~ delivery of a packing box corresponding to the selected type of packing box to the ~~user~~, user to a server of a transport operator via the Internet.

4. (Currently Amended) ~~A~~ The product maintenance method according to claim 3, further comprising:

transmitting information instructing pick up of ~~that~~ the product packed in the packing box ~~be picked up~~ from the user to the server of the transport operator via the Internet; and

transmitting information instructing delivery of the product that has been repaired to the ~~user~~user, to the transport operator via the Internet upon completion of repair of the product.

5. (Currently Amended) A product maintenance method for processing maintenance of a product, comprising:

receiving information regarding a repair request for a product from a terminal of a user who uses the product via the Internet; and

transmitting information regarding the product ~~which~~ that enables a transport operator to select a packing box corresponding to the product for which the repair request ~~for which~~ has been received, and information instructing delivery of the selected packing box to the ~~user~~, user to a server of the transport operator via the Internet.

6. (Currently Amended) ~~A~~ The product maintenance method according to claim 5, further comprising:

transmitting information instructing ~~that~~ pick up of the product packed in the packing box ~~be picked up~~ from the user to the server of the transport operator via the Internet; and

transmitting information instructing delivery of the product that has been repaired to the ~~user,~~user to the transport operator via the Internet upon completion of repair of the product.

7. (Currently Amended) ~~A~~ The product maintenance method according to claim 6, further comprising:

transmitting information regarding ~~an repair~~ repair cost estimate for the ~~product,~~product for which the repair request ~~for which~~ has been ~~received,~~received to the terminal of the user via the Internet prior to starting a repair work;

obtaining information regarding a repair approval based upon the estimate from the user via the Internet; and

the repair cost estimate including a price of the packing box and a price of ~~collecting~~ picking up and delivering the product.

8. (Currently Amended) A product maintenance method for processing maintenance of a product, comprising:

receiving information regarding a repair request for a product from a terminal of a user who uses the product via the Internet;

transmitting information regarding a repair cost estimate for the ~~product,~~product for which the repair request ~~for which~~ has been received ~~received~~, to the terminal of the user via the Internet; and

obtaining information regarding a repair approval based upon the estimate from the user via the Internet.

9. (Currently Amended) ~~A~~ The product maintenance method according to claim 8, further comprising:

transmitting information regarding an estimate of a repair completion date to the terminal of the user together with the estimate for the repair cost.

10. (Currently Amended) A product maintenance method for processing maintenance of a product, comprising:

receiving information regarding a repair request for a product from a terminal of a user who uses the product via the Internet;

assigning a repair order ID corresponding to the repair request; and

transmitting information indicating the repair order ID to the terminal of the user via the ~~Internet~~Internet;

storing a repair progress status for the product at each stage including a delivery preparation status in a storage device in correspondence to the repair order ID; and

when an inquiry on the repair progress status is made from the terminal of the user by indicating the repair order ID via the Internet, obtaining the repair progress status corresponding to the repair order ID from the storage device and transmitting information regarding the repair progress status obtained to the terminal of the user via the Internet.

11. (Canceled)

12. (Currently Amended) A product maintenance method for processing maintenance of a product, comprising:

receiving information regarding a repair request for a product from a terminal of a user who uses the product via the Internet;

transmitting information ~~with regard to~~regarding repair conditions set for repairing the product to the terminal of the user via the Internet;

transmitting screen information for displaying an input screen ~~to enable~~that enables entry of user information including information with regard to the product to be repaired to the terminal of the user via the Internet;

receiving information regarding an agreement ~~to~~of the repair conditions and the user information from the terminal of the user via the Internet;

determining to receive the repair request for the product;

assigning a repair order ID corresponding to the repair request;

storing the user information in a storage device together with the repair order ID;

transmitting information indicating the repair order ID to the terminal of the user via the Internet;

storing data regarding various types of packing boxes that are suitable for different products in a database;

selecting a type of packing box ~~corresponding that corresponds~~ to the ~~product, product~~ for which the repair request ~~for which~~ has been ~~received, received~~ based upon product information and the data stored in the database;

transmitting information ~~instructing that instructs~~ delivery of a packing box corresponding to the selected type of packing box to the ~~user, user~~ to a server of a transport operator via the Internet;

transmitting information instructing pick up ~~that of~~ the product packed in the packing box ~~be picked up~~ from the ~~user, user~~ to the server of the transport operator via the Internet;

transmitting information regarding a repair cost estimate for the ~~product, product~~ for which the repair request ~~for which~~ has been ~~received, received~~ to the terminal of the user via the Internet prior to starting a repair work;

obtaining information regarding a repair approval based upon the estimate from the terminal of the user via the Internet;

storing a repair progress status for the product at each stage ~~including a delivery preparation status~~ in a storage device in correspondence to the repair order ~~ID, ID~~, the repair progress status including a delivery preparation status;

when an inquiry on the repair progress status is made from the terminal of the user by indicating the repair order ID via the Internet, obtaining the repair progress status corresponding to the repair order ID from the storage device and transmitting information regarding the repair progress status ~~thus~~-obtained to the terminal of the user via the Internet;

transmitting information instructing delivery of the product that has been repaired to the ~~user,~~user to the server of the transport operator via the Internet upon completion of repair of the product; and

transmitting information instructing that a repair fee be collected to a server of a repair fee collector via the Internet upon completion of the repair on the product.

13. (Canceled)

14. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business operator that is connected with a terminal of a product user, a server of a transport operator and a server of a repair fee collector via the Internet, ~~wherein~~

wherein the server of the product maintenance business operator executes:

_____processing for displaying repair conditions set for a product on a homepage ~~on~~ via the Internet;

_____processing for inputting information from the product user indicating an agreement ~~to~~of the repair conditions and storing the information in a storage device; and

_____processing for assigning a repair order number and notifying the product user of the repair order number via the Internet.

15. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business operator that is connected with a terminal of a product user, a server of a transport operator and a server of a repair fee collector via the Internet, ~~wherein~~

—— ~~wherein~~ the server of the product maintenance business operator executes:

—— processing for storing data of different types of packing boxes corresponding to various types of products in a database;

—— processing for searching a type of packing box ~~corresponding~~ that corresponds to a ~~product,~~ product for which a repair request ~~for which~~ has been issued by the product ~~user,~~ user from the database ~~having stored~~ that stores ~~therein~~ the data of the different types of packing boxes; and

—— processing for issuing a request to the transport operator for delivery of a packing box ~~corresponding~~ that corresponds to the type of packing box that has been selected through a search to the product user via the Internet.

16. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business operator; and

a server of a transport operator, wherein:

—— the server of the product maintenance business operator and the server of the transport operator are connected with each other and are also connected with a terminal of a product user and a server of a repair fee collector, via the Internet;

—— the server of the product maintenance business operator transmits information indicating a type of ~~product,~~ product for which a repair request ~~for which~~ has been issued by the product ~~user,~~ and user and a request for packing box ~~delivery,~~ delivery to the server of the transport operator via the Internet; and

_____ the server of the transport operator stores data representing different types of packing boxes ~~that correspond~~ corresponding to various types of products in a database, and searches a type of packing box corresponding to the ~~product,~~ product for which the repair request ~~for which~~ has been issued by the product ~~user,~~ user from the database ~~having stored therein~~ that stores the data representing the different packing boxes.

17. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business operator that is connected with a terminal of a product user, a server of a transport operator and a server of a repair fee collector via the Internet, ~~wherein~~

wherein the server of the product maintenance business operator executes:

_____ processing for transmitting a repair cost estimate for the ~~product,~~ product for which the repair request ~~for which~~ has been issued by the product ~~user,~~ user to the product user in an electronic mail via the Internet; and

_____ processing for receiving an approval of contents of the repair cost estimate and the repair request from the product user via the Internet.

18. (Currently Amended) ~~The~~ A-product maintenance business system according to claim 17, wherein

the server of the product maintenance business operator estimates a delivery completion date ~~in addition to estimating~~ and estimates a repair cost for the product, the server of the product maintenance business operator and transmits ~~transmitting~~ the repair cost estimate with the repair delivery completion date. ~~date entered therein.~~

19. (Currently Amended) ~~A-~~ The product maintenance business system according to claim 17, wherein

the repair cost includes fees for a price of a packing box delivered to the product user and fees for delivering the packing box and delivering the product to be repaired.

20. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business operator that is connected with a terminal of a product user, a server of a transport operator and a server of a repair fee collector via the Internet, wherein:

_____the server of the product maintenance business operator assigns a repair order number and notifies the terminal of the product user of the repair order number via the Internet upon receiving a repair order for a product from the terminal of the product user via the Internet, and identifies the product under repair in correspondence to the repair order number when there is an inquiry from the terminal of the product ~~user~~-user;

_____the server of the product maintenance business operator stores a repair progress status for the product at each stage including a delivery preparation status in a storage device in correspondence to the repair order ID; and

_____when an inquiry on the repair progress status is made from the terminal of the product user by indicating the repair order ID via the Internet, the server of the product maintenance business operator obtains the repair progress status corresponding to the repair order ID from the storage device and transmits information regarding the repair progress status obtained to the terminal of the product user via the Internet.

21. (Canceled)

22. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business administrator that is connected with a terminal of a product ~~user~~-user,

_____a server of a product repair service ~~operator;~~operator,

_____a server of a transport ~~operator;~~operator, and

_____a server of a repair fee collector, wherein:

_____ ~~wherein~~ the server of the product maintenance business administrator, the server of the product repair service operator, the server of the transport operator, and the server of the repair fee collector are connected via the ~~Internet;~~Internet; ~~and~~wherein

_____ the server of the product maintenance business administrator executes:

_____ processing for displaying repair conditions set for a product on a homepage ~~on~~via the Internet;

_____ processing for inputting information from the product user indicating an agreement ~~to~~of the repair conditions and storing the information in a storage device; and

_____ processing for assigning a repair order number and notifying the product user of the repair order number via the Internet.

23. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business administrator that is connected with a terminal of a product ~~user;~~user,

_____a server of a product repair service ~~operator;~~operator,

_____a server of a transport ~~operator;~~operator, and

_____a server of a repair fee collector, wherein:

_____ ~~wherein~~ the server of the product maintenance business administrator, the server of the product repair service operator, the server of the transport operator, and the server of the repair fee collector are connected via the ~~Internet;~~Internet; ~~and~~ ~~wherein~~

_____ the product maintenance business administrator server executes:

_____ processing for storing data of different types of packing boxes
~~corresponding that correspond~~ to various types of products in a database;

_____ processing for searching a type of packing box corresponding to a
~~product, a product for which a~~ repair request ~~for which~~ has been issued by the product
~~user, user~~ from the database having stored therein the data of the different ~~packing~~ packing
boxes; and

_____ processing for issuing a request to the transport operator for delivery of
a packing box corresponding to the type of packing box that has been selected through a
search to the product user via the Internet.

24. (Currently Amended) A product maintenance business system for offering
product repair services, comprising:

a server of a product maintenance business administrator; and

a server of a transport operator, wherein:

_____ the server of the product maintenance business administrator and the server of
the transport operator are connected with each other and are also connected with a terminal of
a product user, a server of a product repair service operator and a server of a repair fee
collector via the Internet;

_____ the server of the product maintenance business administrator transmits
information indicating a type of a ~~product, product for which~~ a repair request ~~for which~~ has
been issued by the product ~~user, user~~ and a request for packing box delivery to the server of
the transport operator via the Internet; and

_____ the transport operator server stores data representing different types of packing
boxes ~~corresponding that correspond~~ to various types of products in a database, and searches
a type of packing box corresponding to the ~~product, product for which~~ the repair request ~~for~~

~~which~~ has been issued by the product ~~user,~~user from the database ~~having st~~that stores ~~ored~~
~~therein~~ the data representing the different packing boxes.

25. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business administrator that is connected with a terminal of a product ~~user;~~user,

——a server of a product repair service ~~operator;~~operator,

——a server of a transport ~~operator~~operator; and

——a server of a repair fee collector, wherein:

——~~wherein~~ the server of the product maintenance business administrator, the server of the product repair service, the server of the transport operator and the server of the repair fee collector are connected via the Internet, ~~and wherein:~~

——the server of the product maintenance business administrator executes:

——processing for transmitting a repair cost estimate for the ~~product,~~product for
which a repair request ~~for which~~ has been issued by the product ~~user,~~user to the product user in an electronic mail via the Internet; and

——processing for receiving an approval of contents of the repair cost estimate and the repair request from the product user via the Internet.

26. (Currently Amended) ~~A-~~The product maintenance business system according to claim 25, ~~wherein~~wherein:

the server of the product maintenance business administrator estimates a delivery completion date ~~in addition to estimating~~and a repair cost for repairing the ~~product~~
~~and product,~~ the server of the product maintenance business administrator transmits
transmitting the repair cost estimate with the repair completion date, ~~date entered therein.~~

27. (Currently Amended) ~~A~~ The product maintenance business system according to claim 25, wherein:

the repair cost includes fees for a price of a packing box delivered to the product ~~user~~user, and fees for delivering the packing box and ~~fees for~~ delivering the product to be repaired.

28. (Currently Amended) A product maintenance business system for offering product repair services, comprising:

a server of a product maintenance business administrator that is connected with a terminal of a product ~~user~~; user,

——a server of a product repair service ~~operator~~; operator,

——a server of a transport ~~operator~~; operator, and

——a server of a repair fee collector, wherein:

wherein the server of the product maintenance business administrator, the server of the product repair service operator, the server of the transport operator and the server of the repair fee collector are connected via the ~~Internet~~; Internet; ~~and wherein~~:

——the server of the product maintenance business administrator assigns a repair order number and notifies the terminal of the product user of the repair order number via the Internet upon receiving a repair order for a product from the terminal of the product user via the Internet, and identifies the product under repair in correspondence to the repair order number when there is an inquiry from the terminal of product ~~user~~; user;

——the server of the product maintenance business operator stores a repair progress status for the product at each stage including a delivery preparation status in a storage device in correspondence to the repair order ID; and

——when an inquiry on the repair progress status is made from the terminal of the product user by indicating the repair order ID via the Internet, the server of the product

maintenance business operator obtains the repair progress status corresponding to the repair order ID from the storage device and transmits information regarding the repair progress status obtained to the terminal of the product user via the Internet.

29. (Currently Amended) A computer-readable computer program product containing a program for product maintenance processing, the program comprising:

an instruction for storing data with regard to various types of packing boxes suitable for different products in a database;

an instruction for receiving a repair request for a product from a terminal of a user who uses the program via the Internet;

an instruction for selecting a type of packing box corresponding to the ~~product~~, the product for which the repair request for which has been received, received based upon product information and the data stored in the database; and

an instruction for transmitting information instructing delivery of a packing box ~~corresponding that corresponds~~ to the type of packing box that has been selected to the user to a server of a transport operator via the Internet.

30. (Currently Amended) ~~A~~-The computer-readable computer program product according to claim 29, wherein

the computer-readable computer program product is a recording medium on which the program is recorded.

31. (Canceled).

32. (New) The product maintenance method according to claim 10, further comprising:

when an inquiry regarding repair cost for the product is made from the terminal of the user by indicating the repair order ID via the Internet, transmitting information

regarding the repair cost for the product corresponding to the repair order ID to the terminal of the user via the Internet.
